

How ABA helps

Applied Behavior Analysis (ABA) is an evidence-based approach that helps children with autism build the skills they need for everyday life.

What therapy achieves:

Every child has different challenges — whether buttoning a shirt, expressing needs, or connecting with friends. We break each skill into small, manageable steps and practice until it becomes second nature.

Your child will work on:

Communication

Stating needs, asking questions, connecting with others

Daily living

Dressing independently, managing routines, personal care

Motor skills

Writing, tying shoes, catching a ball

Regulation

Identifying feelings, calming down, managing transitions

What we offer

✓ In-Home ABA Therapy

Learning happens where life happens: at the kitchen table, on the living room floor, between laughter and snack time.

✓ Community-Based Therapy

From the park to the store, we bring learning to the places that are naturally part of your child's life.

✓ School Support & Advocacy

We help you communicate with teachers and staff, making sure school is a place of growth.

✓ Parent Training

Learn what works and why, gain practical tools, and stay supported every step of the way.

✓ Medicaid and major insurance plans accepted

✓ We handle all the paperwork, billing, and authorizations for you

How progress actually happens

1. It starts with connection

We talk about your child and check insurance coverage. We answer your questions and make sure the first steps feel clear and supported.

2. We listen with intent

Our Board Certified Behavior Analyst (BCBA) assesses your child to see what challenges them, and what supports their growth.

3. We build what works

Our experienced team partners with you to design a therapy plan that fits your life.

4. Then watch growth happen

Therapy begins, steady and personal. We celebrate progress, adjust when needed, and stay close as new milestones take shape.

Insurance forms. Endless paperwork. We know that side of therapy can feel overwhelming — so we take it off your plate.
